

Valentino_CAPUCCI_CV

Valentino Capucci graduated in 1967 at the State Institute for Ceramics in Faenza (Italy). He is currently head of the R&D team of Active Surfaces®, the new and innovative technology based on the photocatalytic properties of the new generation of IRIS CERAMICA group's products.

His expertise extends to leading the world's first project on the use of hydrogen in a ceramic kiln, named "Terra Fuoco Acqua." This initiative not only demonstrates his dedication to sustainable innovation but also underscores his profound expertise in the field of ceramics, particularly in the production and handling of large slabs. His capability in managing complex, pioneering projects in material science and environmental technology is further highlighted by his successful oversight of this project, which merges traditional ceramic practices with cutting-edge, eco-friendly technology.
